

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Mossé YP, Lim MS, Voss SD, et al. Safety and activity of crizotinib for paediatric patients with refractory solid tumours or anaplastic large-cell lymphoma: a Children's Oncology Group phase 1 consortium study. *Lancet Oncol* 2013; published online April 16. [http://dx.doi.org/10.1016/S1470-2045\(13\)70095-0](http://dx.doi.org/10.1016/S1470-2045(13)70095-0).

Supplementary material

Goals and Objectives

Primary Aims

- To estimate the maximum tolerated dose (MTD) and recommend a Phase 2 dose of PF-02341066 administered orally twice daily to children with relapsed/refractory solid tumors and anaplastic large cell lymphoma (ALCL).
- To define and describe the toxicities of PF-02341066 administered on this schedule.
- To characterize the pharmacokinetics of PF-02341066 in children with refractory cancer.

Secondary Aims

- To preliminarily define the anti-tumor activity of PF-02341066 within the confines of a Phase 1 study.
- To obtain initial Phase 2 data on the anti-tumor activity of PF-02341066 in children with relapsed/refractory neuroblastoma and ALCL.
- To preliminarily examine the relationship between ALK status (e.g, the presence of a mutation, duplication, amplification, and/or translocation) in patients with NB or ALCL and response to PF-02341066.
- To preliminarily examine the relationship between MRD status and clinical response to PF-02341066 in patients with ALCL.

Patient eligibility

Age: Patients must be > than 12 months and ≤ 21 years of age at the time of study enrollment.

Diagnosis:

- Part A1: Patients with relapsed or refractory solid tumors or ALCL (excluding patients with primary or metastatic CNS tumors or patients with primary cutaneous ALCL).
- Part A2: Patients with confirmed ALK fusion proteins, ALK mutations, ALK amplification (defined as greater than 4-fold increase in the *ALK* signal number as compared to reference signal number on chromosome 2q arm) or MET mutation or amplification. Testing to confirm the presence of ALK fusion proteins, ALK mutations, ALK amplification or evidence of MET mutation or amplification for eligibility purposes must be performed as a CLIA-certified assay. ALK immunohistochemistry can be used as a surrogate for FISH for patients with IMT or ALCL.
- Part A3: Patients with relapsed or refractory neuroblastoma, with or without bone marrow involvement, who are not eligible for Part A1 or A2 or cannot enroll on Part A1 because of stratum suspension or lack of available spots. These patients were enrolled at one dose level below the dose level at which patients on Part A1 were actively enrolling.

Organ Function Requirements:

Patients must have Adequate Bone Marrow Function Defined as:

Patients on Part A1 of the study:

- a. For patients with solid tumors or ALCL without bone marrow involvement:

- Peripheral absolute neutrophil count (ANC) $\geq 1000/\text{mm}^3$
- Platelet count $\geq 75,000/\text{mm}^3$ (transfusion independent, defined as not receiving platelet transfusions within a 7 day period prior to enrollment)
- Hemoglobin ≥ 8.0 g/dL (may receive RBC transfusions)

b. Patients with known bone marrow metastatic disease:

- Peripheral absolute neutrophil count (ANC) $\geq 750/\text{mm}^3$
- Platelet count $\geq 25,000/\text{mm}^3$ (may receive platelet transfusions)
- Hemoglobin ≥ 8.0 g/dL (may receive RBC transfusions)
- Not known to be refractory to red cell or platelet transfusions

Transfusions are permitted to meet both the platelet and hemoglobin criteria. Note: Patients with known bone marrow metastatic disease are not evaluable for hematological toxicity for the purposes of dose escalation.

Patients on Part A2 and Part A3 of the study:

- Peripheral absolute neutrophil count (ANC) $\geq 750/\text{mm}^3$
- Platelet count $\geq 25,000/\text{mm}^3$ (may receive platelet transfusions)
- Hemoglobin ≥ 8.0 g/dL (may receive RBC transfusions)
- Not known to be refractory to red cell or platelet transfusions

Transfusions are permitted to meet both the platelet and hemoglobin criteria.

Adequate Renal Function Defined as:

- Creatinine clearance or radioisotope GFR $\geq 70\text{ml}/\text{min}/1.73\text{ m}^2$ or
- A serum creatinine based on age/gender as follows:

Age	Maximum Serum Creatinine (mg/dL)	
	Male	Female
1 to < 2 years	0.6	0.6
2 to < 6 years	0.8	0.8
6 to < 10 years	1	1
10 to < 13 years	1.2	1.2
13 to < 16 years	1.5	1.4
≥ 16 years	1.7	1.4

The threshold creatinine values in this Table were derived from the Schwartz formula for estimating GFR¹⁸ utilizing child length and stature data published by the CDC.

Adequate Liver Function Defined as:

- Bilirubin (sum of conjugated + unconjugated) $\leq 1.5 \times \text{ULN}$ for age
- SGPT (ALT) ≤ 110 U/L. For the purpose of this study, the ULN for SGPT is 45 U/L.
- Serum albumin ≥ 2 g/dL.

Adequate Cardiac Function defined as:

- QTc ≤ 480 msec

Dose Escalation and Determination of MTD

The rolling six phase 1 trial design will be used for the conduct of Part A1 of this study.* Two to six patients can be concurrently enrolled onto a dose level, dependent upon (1) the number of patients enrolled at the current dose level, (2) the number of patients who have experienced DLT at the current dose level, and (3) the number of patients entered but with tolerability data pending at the current dose level. Accrual is suspended when a cohort of six has enrolled or when the study endpoints have been met.

Dose level assignment is based on the number of participants currently enrolled in the cohort, the number of DLTs observed, and the number of participants at risk for developing a DLT (i.e., participants enrolled but who are not yet assessable for toxicity). For example, when three participants are enrolled onto a dose cohort, if toxicity data is available for all three when the fourth participant entered and there are no DLTs, the dose is escalated and the fourth participant is enrolled to the subsequent dose level. If data is not yet available for one or more of the first three participants and no DLT has been observed, or if one DLT has been observed, the new participant is entered at the same dose level. Lastly, if two or more DLTs have been observed, the dose level is de-escalated. This process is repeated for participants five and six. In place of suspending accrual after every three participants, accrual is only suspended when a cohort of six is filled. When participants are inevaluable for toxicity, they are replaced with the next available participant if escalation or de-escalation rules have not been fulfilled at the time the next available participant is enrolled onto the study.

The following table provides the decision rules for enrolling a patient at (i) the current dose level (ii) at an escalated dose level, (iii) at a de-escalated dose level, or whether the study is suspended to accrual:

# Pts Enrolled	# Pts with DLT	# Pts without DLT	# Pts with Data Pending	Decision
2	0 or 1	0, 1 or 2	0, 1 or 2	Same dose level
2	2	0	0	De-escalate*
3	0	0, 1 or 2	1, 2 or 3	Same dose level
3	1	0, 1 or 2	0, 1 or 2	Same dose level
3	0	3	0	Escalate**
3	≥ 2	0 or 1	0 or 1	De-escalate*
4	0	0, 1, 2 or 3	1, 2, 3 or 4	Same dose level
4	1	0, 1, 2 or 3	0, 1, 2 or 3	Same dose level
4	0	4	0	Escalate**
4	≥ 2	0, 1 or 2	0, 1 or 2	De-escalate*
5	0	0, 1, 2, 3 or 4	1, 2, 3, 4 or 5	Same dose level
5	1	0, 1, 2, 3 or 4	0, 1, 2, 3 or 4	Same dose level
5	0	5	0	Escalate**
5	≥ 2	0, 1, 2 or 3	0, 1, 2 or 3	De-escalate*

# Pts Enrolled	# Pts with DLT	# Pts without DLT	# Pts with Data Pending	Decision
6	0	0, 1, 2, 3, or 4	2, 3, 4, 5 or 6	Suspend
6	1	0, 1, 2, 3 or 4	0, 1, 2, 3 or 4	Suspend
6	0 or 1	5 or 6	0 or 1	Escalate**
6	≥ 2	0, 1, 2, 3 or 4	0, 1, 2, 3 or 4	De-escalate*

* If six patients already entered at next lower dose level, the MTD has been defined.

** If final dose level has been reached, the recommended dose has been reached.

If two or more of a cohort of up to six patients experience DLT at a given dose level, then the MTD has been exceeded and dose escalation will be stopped.

Since this agent is not expected to be associated with dose-limiting myelosuppression, at least 2 of every cohort of 3 or 5 of every cohort of 6 patients must be evaluable for hematologic toxicity. If hematologic dose limiting toxicity is observed, all subsequent patients who are enrolled in Part A1 must be evaluable for hematologic toxicity. Patients in Part A2 or A3 may be enrolled irrespective of whether or not they have bone marrow involvement.
